## PERSONAL PROJECTS

### 1-Interactive Wall

This application is created with the React JavaScript library, data management is carried out on the non-relational database Firebase. Users must register to post their post, it will contain title, image and description. Other registered users will be able to like it and the post can be deleted only by its creator.

<https://flastynlay.netlify.app/> Desktop version

### 2- Library MJ

This application is created with the React JavaScript library and we use the Google Books API for data consumption, it contains the books according to their category in which you can filter the one of your preference, there is also the offers section, we have a space in which they can send their concerns and finally in the contact area the creators of the page are displayed. Project link: <https://library-mj.netlify.app/>

### 3- "Briefcase " just for pc

My portfolio is created with the React JavaScript library. Link: <https://jose-briefcase.netlify.app/>

### 4- Easy Phone Store

Link: <https://youtu.be/R2YIghbXGCM>
